iOS Developer

The Position

We are seeking an experienced mobile iOS Developer to work on a variety of development projects. This role is an ideal opportunity to be on the ground floor of developing progressive iOS applications in a hands-on environment. You will be implementing commercial App Development including methods like OO Design and iOS frameworks such as Xcode, Objective-C, Swift etc. You will add to your experience with RESTful Web Services, XML and JSON. The iOS developer must also have a strong understanding of the patterns and practices that revolve around the iOS platform.

We are looking for someone who is enthusiastic about collaborative working, sharing of ideas and a willingness to learn.

We are a passionate, forward-thinking, innovative company where things are always happening. We're looking for people who work quickly, are competitive self-starters, smart and do what is needed.

Responsibilities

- Development of the iOS application for the product, adding new features and correcting faults when needed.
- Development and maintenance of applications aimed at a range of iOS devices including mobile phones and tablet computers (iPhone, iPad, app Store).
- Ensure the performance, quality, and responsiveness of applications.
- Collaborating with your teammates to define, design, and ship new features.
- Identify and correct bottlenecks and fix bugs.
- Help maintain code quality, organisation, and automation.
- Look at UI/UX design problems and design ways around them.
- Design and implement unique features not seen in common apps.

Required skills

- Strong knowledge of SWIFT/ SWIFT3.
- UI/UX design skills
- Familiarity of other web technologies and UI/UX standards.
- Understanding of Apple's design principles and interface guidelines.
- Good grasp of languages such as Objective- C, XML.
- Good grasp of data structures such as JSON.

Job Advertisement

- Experience in using Bugzilla.
- Experience with iOS frameworks such as Core Data, Core Animation.
- Familiarity with RESTful APIs to connect iOS applications to back-end services.
- Proficiency in architecture patterns (MVC, MVVM).
- Auto layout knowledge.
- Knowledge of software development methodologies.
- All applicants must have the right to work in the UK without restrictions.
- Must be a self-starter with a strong attention to detail.

Desirable Skills

- Knowledge of low-level C-based libraries is preferred.
- Competence in Object Orientated Design.
- Experience with performance and memory tuning.
- Familiarity with cloud message APIs and push notifications.
- Knack for benchmarking and optimisation.
- Understanding of code versioning tools.
- Familiarity with continuous integration.
